Next generation Debuggers available. Now!

Giving you a new level of flexibility and scalability, the next generation of tools from Crosshairs Embedded (previously ActiveDSP) is here.

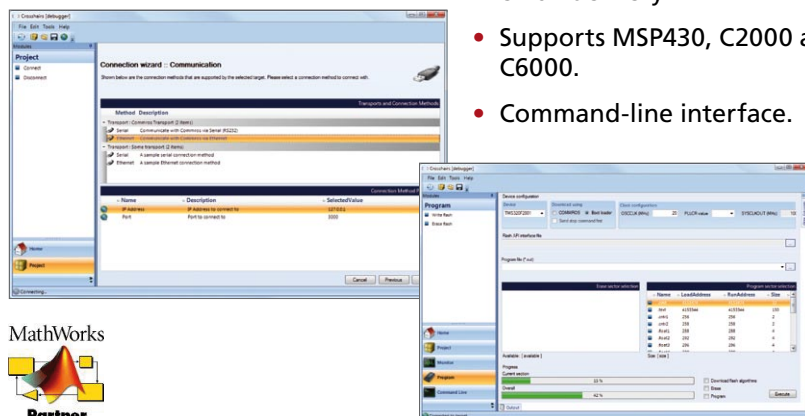

Based on 10 years development by some of the world's leading software designers, this new system brings you the benefit of a new level of functionality and effectiveness - enabling you to profit from savings in time, money and stress.

Designed and built in Scandinavia and already at the heart of many blue chip clients' business success, it's scalable, easy to use and exceptionally cost-effective.

Functional Debugger Version 1.1

- Works in real time for seamless remote operation.
- Internal/external flash programming.
- Real-time on-chip datalogger with configurable triggers.
- Advanced memory inspection functionality.
- Supports multiple concurrent connections using various image formats.
- Configurable alarms with SMS/email delivery.
- Supports MSP430, C2000 and C6000.
- Command-line interface.

Top quality product

If you are looking for a simple, proven and efficient Debugger for the TMS320F28xx devices, then Crosshairs Embedded is likely the most appropriate solution.
